

Practice Area User Competency & Qualification

Predictable success in an unpredictable world.

Ideal Health IT provides a complete, integrated user competency & qualification training program to prepare and support project, clinical, operational and technical users for their new role in an IT-essential world. Planning for success means an organizational commitment to training your team to thrive in the new world of Meaningful Use. Rely on a trusted partner to enable your organization and ready them as meaningful users. **Reduce risk. Deliver results. Choose Ideal Health IT.**

Practice Area focuses on User Competency & Qualification

In this rapidly changing industry, it is more important than ever to make sure that your organization is equipped to operate in a healthcare environment that is enabled and integrated with health IT systems. Training programs need to address not only the specific clinical and operational systems functions, but also how the user effectively applies these integrated tools to perform their job. Training has often been a lost budget item, but this cannot happen anymore. Meaningful Use demands meaningful users. Clinical and operational staff need to embrace every aspect of their evolving roles and fully understand how new technology is intended to support them.

Ideal Health IT structures its user competency & qualification training programs to address all of the transformational, clinical, operational and process needs of the clinical organization. These defined and integrated “certificate” programs give your organization the assurance and peace of mind that your users are equipped to perform at optimum efficiency based on a detailed understanding of the workflow, requirements, compliance obligations and needs of their particular roles. This is not a high-level health IT certification. This is practical, role-based, environment-specific knowledge tailored to meet your business and clinical needs. Our user competency & qualification training programs include:

- Health IT Management
- Information Governance
- Business Planning, Change and Training
- Project and Program Management
- System Preparation and Testing
- Clinical Systems User Training
- Integrated and Interoperable Technology
- Support and Delivery Management
- Information Management, Use and Reporting

All of these programs are developed in a framework that is easily configured for your specific environment. Your users will earn a formal certification upon successful completion of the program.

Individual Pathways

At Ideal Health IT, we recognize that each and every client is unique. Our goal is to support you through the complexities of business change by helping to select and chart clinical and technical pathways that match your individual needs and circumstances. By focusing exclusively on the health information technology market, we understand the challenges you face. We bring a client-centric approach, coupled with verified best practices, to help you through these complex changes and we work closely with you to build a sustainable model for aligning change with strategic objectives.
